

The screenshot shows a search results page for "hydroxyapatite". At the top, there's a navigation bar with links for Home, New Workspace, Browse, and Help. Below that is a search bar containing "hydroxyapatite" with a dropdown arrow icon. To the right of the search bar are links for "Not sure of the spelling?", "Search Tips and Advice", and a magnifying glass icon. On the left, a sidebar titled "Use the links below to search for additional information on hydroxylapatite." lists several categories: Encyclopædia Britannica, Britannica Student Encyclopedia, Britannica Internet Guide, and Video & Media. The main content area features the title "hydroxylapatite" in large bold letters, followed by a subtitle "Encyclopædia Britannica Article". Below the title are links for Article, Index Entry, Tables, Email this article, Print this article, and Cite this article. The main text describes hydroxylapatite as a phosphate mineral, calcium hydroxide phosphate [Ca₅(PO₄)₃OH], which forms glassy, often green crystals and masses. It notes that it is seldom pure in nature and often occurs mixed with fluorapatite, where fluorine substitutes for the hydroxyl (OH) group. This mixture is part of a solid-solution series between pure hydroxylapatite and pure fluorapatite. Collophane, found in fossil bone and phosphate rock, belongs to this series. A link to "phosphate mineral (table)" is provided for physical properties. At the bottom left, there's a "To cite this page" section with the URL "http://www.search.eb.com/eb/article?eu=42698" and the note "[Accessed May 23, 2002]". The screenshot shows a search results page for the query "brushite". At the top, there's a navigation bar with links for Home, New Workspace, Browse, and Help. Below that is a search bar with the word "brushite" and a dropdown arrow. To the right of the search bar is a link "Not sure of the spelling? Search Tips and Advice". A large, bold title "brushite" is centered above a sub-header "Encyclopaedia Britannica Article". On the left, a sidebar titled "Use the links below to search for additional information on brushite." lists several categories: Encyclopaedia Britannica, Britannica Student Encyclopedia, Britannica Internet Guide, and Video & Media. The main content area starts with a definition: "rare mineral, a hydrated calcium phosphate ($\text{CaHPO}_4 \cdot 2\text{H}_2\text{O}$), that forms colourless to pale-yellow, transparent to translucent efflorescences or tiny crystals. It occurs in small quantities in many phosphate deposits, particularly as an incrustation on ancient bones and as a decomposition product of guano (seafowl excrement). It dehydrates readily to form monetite. For detailed physical properties, see phosphate mineral (table)."
